

std::runtime_error

```
classDiagram
    class std_runtime_error["std::runtime_error"]
    class curlpp_RuntimeError["curlpp::RuntimeError"]
    curlpp_RuntimeError --|> std_runtime_error
```

The diagram illustrates an inheritance relationship. At the top is a class box for `std::runtime_error`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below it is a class box for `curlpp::RuntimeError`, also divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section contains three public methods: `+ RuntimeError()`, `+ RuntimeError()`, and `+ ~RuntimeError()`. A blue arrow with an open triangular head points from the bottom of the `curlpp::RuntimeError` box to the bottom of the `std::runtime_error` box, indicating that `curlpp::RuntimeError` inherits from `std::runtime_error`.

curlpp::RuntimeError

+ RuntimeError()
+ RuntimeError()
+ ~RuntimeError()
